

# Anti-CCP: Primary serological marker for rheumatoid arthritis (RA)

### Comparison of ACPA ELISA

Manufacturer	Sensitivity at 98.5% specificity
EUROIMMUN <sup>1</sup>	73%
Manufacturer A <sup>1</sup>	70%
Manufacturer B <sup>1</sup>	74%
Manufacturer C <sup>2</sup>	62%
Manufacturer D <sup>2</sup>	44%
Manufacturer E <sup>2</sup>	67%

<sup>1</sup> Original CCP2 antigen; <sup>2</sup> No original CCP2 antigen (MCV, citrullinated IgG or other)

*Bizzarro et al., Clin Chem 53:8, 2007*

- **Highly specific (> 98%)**
- **Early diagnosis of RA**
- **Prognosis** for the further course of RA
- **Reliable results due to original CCP2 antigen\***

\* patented according to W. J. v. Venrooij, see table
